Compressor Management

## CLOUD SERVICES

\*Modem & Sim Card inside  
Airleader Master Controller Unit

We designed our Master Controller with **reliability, efficiency, and transparency** in mind. Our new Cloud Service is based on the same three principles.

The Master Controller records all compressor data in 100% reliable, one second intervals. Information is stored in the memory of the Master Controller as well as in the Cloud. Data is continuously uploaded to the cloud and is backed up every 20 minutes to ensure the data can be viewed from both sources in case the connection is interrupted. This reliability is unmatched in the industry.

Our Cloud service allows our dealers and customers to check and monitor their compressor control system from anywhere in the world. The system can be controlled and optimized remotely. Password protection provides secure access. Service maintenance notifications as well as system failure alerts can be sent via email.
