with U.S. and Imported Components

NFPA 99 Medical Vacuum Systems

All systems are fully compliant with the latest edition of NFPA 99 and are manufactured in ISO 9001:2015 certified facilities. Powerex has become a leader in vacuum and air systems through our foundation built on engineering, innovation, quality, and service. We are a highly integrated operation, not only assembling systems, but also designing and manufacturing many of the major components. We are proud to say our systems are made in the U.S.A.!

Design Features

Each medical system includes:

- Multiple vacuum pumps
- ASME receiver
- UL listed control panel
- All interconnecting piping and wiring
- Vibration isolation pads and flex connectors
- Manufactured in ISO 9001:2015 certified facilities

Configuration Types

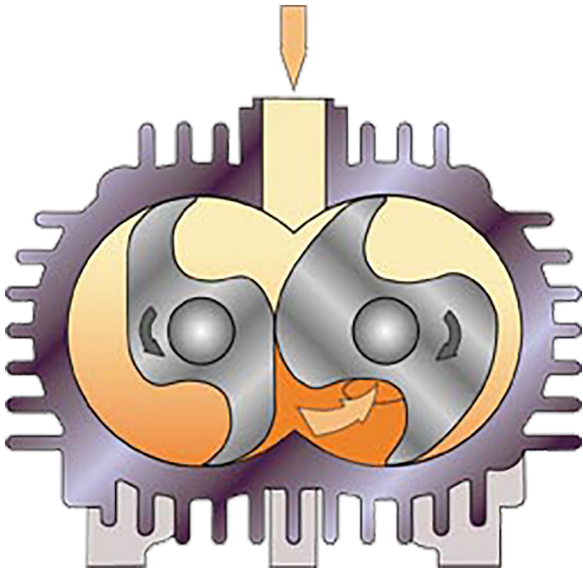

Medical vacuum systems are available in a variety of configuration types, allowing you the flexibility to choose the product that best fits your space. Choose between a skidmount, enclosed, tankmounted, or tank-over package.

Oil-free Claw Technology

Inside the pump housing, two claw shaped rotors take in air as they rotate in opposite directions. The air is compressed by the rotors, then discharged through a silencer to atmosphere. The pumping chamber is dry. There is no contact between the rotors or the cylinder wall eliminating internal wear and parts to replace. The rotors are synchronized by gears requiring a small amount of oil in the gear housing. Gear oil change requirements are minimal at approximately 20,000 hours.

- Most energy efficient technology
- Oil-free compression chamber
- Extremely low maintenance
- No water or sewage costs
- Air-cooled design
- Optional oxygen prepared pumps available to comply with NFPA 99 5.1.3.8.2.1(2) for WAGD applications

Dry Rotary Vane Technology

A rotor is mounted eccentrically in the pump cylinder and contains several sliding vanes. As the rotor turns, centrifugal force causes the vanes to slide outward creating a seal against the cylinder wall. The vanes are constructed of a self-lubricating graphite composite material which allows them to operate against the cylinder wall without the need for any other sealing or lubricating fluid. As a result of the offset rotor, a succession of variable volumes are formed in the cylinder housing creating the flow of vapor through the pump. Vapor is pulled into the pump inlet which is then compressed and discharged through the exhaust to atmosphere.

- No oil anywhere
- Easy to maintain
- No water and sewage costs
- Suitable for dedicated waste anesthesia (WAGD) systems
- Less routine maintenance (no oil changes)

Lubricated Rotary Vane Technology

A rotor is mounted eccentrically in the pump cylinder and contains several sliding vanes. As the rotor turns, centrifugal force causes the vanes to slide outward against the cylinder wall, forming chambers between themselves and the housing. Oil is trapped inside these chambers, creating a seal between the vanes and the cylinder wall and lubricating the vanes for reduced wear. Air is pulled into the pump inlet which is then compressed and discharged into the exhaust box. The oil mixed with the air is then passed through several stages of internal oil-and-mist eliminators to remove 99.9% of the lubricating oil before the exhaust is released to atmosphere. The separated oil is then returned to the oil reservoir.

- 30,000 hour vane life
- Semi-synthetic oil-flooded for lubrication and heat dissipation
- Highest ultimate vacuum levels 29.3" Hg
- No water and sewage costs
- Most suitable for high ambient temperatures

WhisperVAC™ Enclosure Cabinet

Powerex's trademarked enclosure systems offer the lowest noise levels in the industry. Each system is packaged in a rigid steel frame with powder coated panels and lined with sound-deadening insulation. The low noise levels are unmatched in the industry and allow greater flexibility of installation location, while the small footprint simultaneously maximizes floor space.

- Vacuum pumps are enclosed within sound-reducing panels
- Sound intensity is reduced by an average of 14 dBA over comparable open frame systems – 4x sound reduction
 - All systems are well within NIOSH limits of 8 hour exposure
 - Helps protect the hearing of healthcare facility employees
 - Improves working environment near the medical vacuum system
 - Helps avoid disturbing patients and/or hospital employees
- Ultimate sound reduction achieved when packaged with Powerex WhisperAIR™ enclosed scroll medical air systems – *the quietest source equipment in the industry!*
- Patent-pending internal pump cooling system ensures vacuum pumps operate well within acceptable temperature ranges

Hearing Loss Prevention

Occupational hearing loss is the most commonly recorded occupational illness, accounting for 1 in 9 recordable illnesses. Powerex WhisperVAC™ technology provides a real solution for workers operating in loud mechanical rooms, as well as any facility employees who are ever in close proximity to the compressor system.

Hearing loss is a significant cost that is preventable!

Control Panel Options

Standard Premium Control Panel

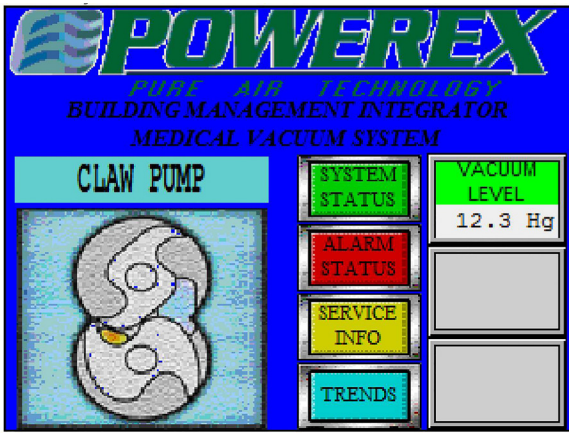

- PLC controller and 6" color HMI touch screen displays the operating status of the unit
- Building automation gateway with BacNet over IP protocol
- UL508A listed and labeled, NEMA 4/12 enclosure
- Visual and audible alarms for:
 - System overload trip
 - High temperature conditions
 - Service intervals
- Panel door includes:
 - Visual and audible alarms
 - HOA switch for each pump

Optional Non-HMI Control Panel

- UL508A listed and labeled, NEMA 4/12 enclosure
- Timed lead/lag alternation
- Visual and audible reserve in use alarm
- Redundant control circuit transformers
- Dry contacts for remote alarm monitoring
- Each vacuum pump provided with:
 - Hand/Off/Auto selector switch
 - Magnetic starter with 3 leg overload protection
 - Visual and audible high temperature shut down
 - Hour meter

BACnet

Standard in Powerex's premium control panel.

- Seamlessly connect to your building management system via Ethernet using BACnet over IP protocol
- Centrally monitor medical gas equipment along with all other facility equipment

Building Automation System

BACnet
over IP

Medical Gas Alarm

Medical Vacuum Filter Assembly

Powerex Medical Vacuum Filter Assemblies are designed to protect the service professionals who perform maintenance on the vacuum systems. The filters remove solid, liquid, and bacterial contamination as small as 0.3 micron with 99.995% efficiency through HEPA-grade filters.

These systems must be used in conjunction with a medical vacuum system to be compliant with the 2018 revision of NFPA 99 (5.1.3.7.4), which requires the addition of inlet bacteriologic filtration at the medical vacuum source.

The filter systems include:

- Multiple filters mounted to a metal frame
- Single point connections for inlet and outlet pipes
- Isolation valves on source side and patient side for each filter
- Clear Borosil glass flask to easily detect liquid accumulation

Optional Variable Frequency Drive

Variable Frequency Drive (VFD) controls improve efficiency over a conventional “on/off” demand-based system by more closely matching the pump speed to the changing load requirements.

The control system calculates the frequency to speed up or slow down the pump based on changes to the demand versus the set-point. Pump speeds matched to demand will result in lower amp draws, prolonged motor life, prolonged bearing life, and reduced energy costs.

VFD controls are an available option for all Powerex duplex through quadplex Medical Oil-free Claw Vacuum systems. VFD systems come standard with a premium HMI touch screen control panel.

Pump without VFD*

Operating Parameters	Oil-free Claw Pump
